

Capitol Disposal Landfill Residential Property Asbestos Declaration Form

The ADEC regulates the disposal of asbestos containing material (ACM), which may only be disposed of in a landfill permitted to accept it. This can include Class I and Class II municipal landfills, inert (construction and demolition) waste landfills, or asbestos landfills. However, each landfill determines its own acceptance policy. **Capitol Disposal Landfill (CDL) does not accept regulated asbestos (RACM).**

Before a demolition or renovation project begins, federal regulations require the **identification of any ACM in the structure**. A person trained and licensed to identify potentially hazardous materials must conduct and record a building survey of the structure and any contained materials.

Prior to 1983 a variety of construction materials contained asbestos fibers. Although some uses were restricted in 1980, asbestos can still be found in wallboard, flooring materials, roofing materials, mastics, thermal protection, and cement products. To ensure that the hazards are properly identified prior to demolition or renovation, a certified inspector must perform a building or hazard survey. Asbestos cannot be identified by sight but can be identified through simple laboratory tests. Samples of each suspected material must be tested to determine the presence of asbestos fibers. Material that contains more than 1% asbestos fibers is ACM. Material that contains more than 1% asbestos fibers that are friable are classified as Regulated Asbestos Containing Material (RACM).

Yes No

- ☐ ☐ Was the structure constructed prior to Dec 31st, 1983?
- ☐ ☐ Are the C&D materials being disposed new and uncontaminated ONLY?
- ☐ ☐ Was an asbestos survey conducted?

*If an asbestos survey was conducted the report must be provided prior to arriving at CDL.

Are the C&D Materials Being Disposed

- ☐ ☐ From a Residential Occupied Structure?
- ☐ ☐ From a Commercial Property or Residential Occupied Structure with 4 or More Dwelling Units?
- ☐ ☐ From a Renovation of the Structure?
- ☐ ☐ From a Demolition of the Structure?

Does your load contain any of the following construction materials: Check all that apply.

- ☐ High temperature felt gaskets from oil/propane/gas heaters
- ☐ Non-Fiberglass insulation materials
- ☐ Coated drywall or plastered wall materials
- ☐ Floor tile or mastics
- ☐ Galbestos siding
- ☐ Popcorn ceiling materials
- ☐ Asphalt roofing
- ☐ Transite pipe products
- ☐ Other materials containing asbestos products

If a building survey was not performed by a licensed inspector all material from a residential demolition project is presumed unacceptable waste and options for management for shipment offsite are available. Capitol Landfill personnel can assist you with more information.

Certification

By signing below, the above-named contractor/generator certifies as follows:

- The information contained in this Certification is true and correct and the contractor/generator has complied with all applicable state laws and regulations;
- The waste materials do not contain RACM.

Furthermore, by signing below, the generator agrees to indemnify and save WM harmless from and against any and all liability, claims, fines, penalties, fees, and costs (including reasonable attorney's fees) that WM may be responsible for or pay out as a result of any misrepresentation in this Certification, including generator's failure to perform an asbestos survey (if required) or failure to disclose information or knowledge that the wastes included asbestos or RACM.
